EMR EHR Connectivity 2.1

NOTICE OF CHANGE

Date: July 13, 2020

SINGLE SIGN-ON (SSO) AND SSO BINDING

Functionality related to SSO and SSO binding in the "EMR EHR Connectivity - 2.0 DFC - Federation Identity and Single Sign-On Requirements" document is **OPTIONAL** for implementation.

Note that proceeding with the implementation of SSO and SSO binding functionality requires the implementation of all SSO and SSO binding requirements in full – a partial implementation is not adequate.

SSO and SSO Binding EMR Requirements

The following table identifies the OMD #s of the specific EMR requirements that relate to SSO and SSO Binding. Refer to the EMR requirements for implementation guidelines.

OMD #	REQUIREMENT
SSO01.01	The EMR Offering MUST present EMR users with the option to log into the EMR Offering using either their EMR credentials or their IDP credentials.
SSO01.02	The EMR Offering MUST allow EMR users to log into the EMR Offering using a Federation SSO Identity user account.
SSO01.03	The EMR Offering MUST continue to provide the EMR user with the ability to log in using only credentials provisioned by the EMR Offering.
SSO02.01	The EMR Offering MUST associate an EMR user's Federation SSO Identity with their EMR user account.
SSO02.02	The EMR Offering MUST provide the ability to disassociate a Federation SSO Identity from an EMR user account.
