

Protect What Matters Yourself, Your Clinic, Your Patients

At OntarioMD (OMD), we're always updating our privacy and cybersecurity training to help clinicians stay confident, compliant, and secure in a rapidly evolving digital environment.

Physicians are overburdened, and AI trust is low

Physicians in Canada spend **9 hours** per week on administrative tasks*

That number is even higher (**10.7 hours**) per week in Ontario*

Nearly **45%** of physicians recognize AI tools as high priority solutions that can **save them about an hour a day on average***

BUT...49% of clinicians who aren't using AI tools cite legal and privacy risks as their top concern*

Cyber risks make the stakes higher

1 in 3 physicians face cyber threats

Breaches can cost hundreds of thousands or more in fees and lost trust

Hackers rely on human mistakes
