Diabetes BMI Recorded

I4C Indicator CDM-DIAB-010: Diabetes BMI Recorded v 2.0

Category: CDM/Diabetes

Purpose:

This indicator is used to identify diabetic patients who have not BMI recorded in the past 12 months.

Source:

Based on the HQO indicator framework version published October 2015.

Base Population:

All patients with an Active demographic status recorded in the EMR who have a confirmed diabetes diagnosis through entry of an appropriate diagnosis code.

Indicator Segments:

Up-to-Date: Count of diabetic patients WITH at least one BMI measurement recorded in the past 12 months.

Overdue: Count of diabetic patients WITHOUT a BMI measurement recorded in the past 12 months.

For a complete list of diagnosis codes used to identify Diabetes, see Diabetes Identification (CDM-DIAB-001).

BMI is automatically calculated from the most recent height and weight measurements recorded in the EMR.

Suggested Indicator Use:

Physician or practice use of this indicator is to identify diabetic patients who are due for a BMI measurement.
