

Changes to EMR Specifications

The various documents that comprised EMR specification v4.2, published on April 1, 2015, served as the baseline for change. This log covers changes made to the documents that comprise the EMR HRM 4.3 Specification, published on August 4, 2017.

EMR HRM 4.3

Type of Change	Description
Major Changes	<ul style="list-style-type: none"> • None
Minor Changes	<ul style="list-style-type: none"> • Changed references to Weighted (W) requirements to Optional (O) • Included the EMR HRM Connectivity Requirements 2.1 - Draft. This document was included in previous HRM specifications and provides information vendors need to know with respect to connecting to the HRM sFTP folders. This document was updated with information already known to existing HRM implementers. • Removed the interdependencies with documents in other specifications so that the EMR HRM Specification 4.3 is packaged with its own Data Dictionary and XML schema files. • Changed references to Hospital Report Manager to <u>Health Report Manager</u>, including updating references in diagrams. • Fixes: <ul style="list-style-type: none"> ○ Guidance for HRM02.06 moved to HRM02.03 ○ Improved guidance for HRM# 78 Message Unique ID. ○ Revised data element references in Section 5 to reference the data element names used in Section 4 instead of the XML element names. • Updated cross document and URL references • Updates throughout for use of common terms, capitalization, grammar and spelling • Updated OntarioMD document template, layout, fonts, colours, etc.
