

Direct, real-time access to drug information through your EMR

Clinicians can now seamlessly access patient medication information from Ontario's Digital Health Drug Repository (DHDR) directly from within their electronic medical records (EMRs). Access is real-time, secure and more convenient for your workflow.

From your EMR, you can view:

- Publicly funded, dispensed drugs, including those paid for by the Ontario Drug Benefit (ODB) program
- Dispensed monitored drugs (narcotics and controlled substances), including opioids
- Publicly funded pharmacy services, such as the MedsCheck Program medication reviews and pharmacist-administered influenza vaccines
- COVID-19 vaccination information from the provincial COVaxON vaccination management system

Make it easier: save time and improve workflow

Access to the DHDR from within your OntarioMD (OMD)-certified EMR aligns better with your EMR workflow and the way you practice. It gives you rapid, real-time and streamlined access to dispensed drug information, saving you time and effort so you can provide more informed patient care.

Benefits to your practice and your patients:

- No need to navigate through multiple websites or log in to additional systems that require more usernames and passwords
- Quick, secure and efficient access to clinically relevant, dispensed drug and pharmacy service information
- Access to the DHDR from your EMR further enables:
 - Improved patient safety, outcomes and continuity of care
 - Decreased risk of medication errors and patient mortality
 - A record of dispensed prescriptions and pharmacy services for more informed clinical decisions
 - More time to diagnose, treat and communicate with patients
 - More efficient medication reconciliation in case of recalls
 - Improved collaboration with other health care providers who also access the DHDR

Gain access to the DHDR!
