

Patient Care Breast Cancer Screening Overdue

i4C Indicator PHC-CAN-002: Patient Care Breast Cancer Screening Overdue v 2.1

Category: Preventive Health Care/Cancer

Purpose:

This indicator is used to prioritize patients that need a recall for breast cancer screening.

Source:

Based on the CIHI indicator framework, version November 2012.

Base Population:

Patients overdue for breast cancer screening plus patients who are up-to-date for screening but will become overdue within 7 months.

Indicator Segments:

<= 3 months overdue: Count of patients Overdue for breast cancer screening (See PHC-CAN-001 Patient Care Breast Cancer Screening User Help) WITHOUT mammogram screening declined or mammogram results pending documented in the past 24 months AND WITH mammogram screening documented in the past 25-27 months inclusive.

> 3 months overdue: Count of patients Overdue for breast cancer screening (See PHC-CAN-001 Patient Care Breast Cancer Screening User Help) WITHOUT mammogram screening declined or mammogram results pending documented in the past 24 months AND WITHOUT mammogram screening documented in the past 25-27 months inclusive.

< 2 months pending: Count of patients Overdue for breast cancer screening (See PHC-CAN-001 Patient Care Breast Cancer Screening User Help) WITH mammogram results pending documented in the past 2 months.

>= 2 months pending: Count of patients Overdue for breast cancer screening (See PHC-CAN-001 Patient Care Breast Cancer Screening User Help) WITHOUT mammogram results pending documented in the past 2 months AND WITH mammogram results pending documented in the past 3-24 months inclusive.

Declined: Count of patients Overdue for breast cancer screening (See PHC-CAN-001 Patient Care Breast Cancer Screening User Help) WITHOUT mammogram results pending documented in the past 24 months AND WITH mammogram screening declined documented in the past 24 months.

Due in < 4 months: Count of patients Up-to-date for breast cancer screening (See PHC-CAN-001 Patient Care Breast Cancer Screening User Help) WITH the most recent mammogram screening documented between 21 and 24 months ago inclusive.

Due in >= 4 and < 7 months: Count of patients Up-to-date for breast cancer screening (See PHC-CAN-001 Patient Care Breast Cancer Screening User Help) WITH the most recent mammogram screening documented between 17 and 20 months ago inclusive.

Mammogram Screening can be documented as a Q131A tracking code that has been submitted for a patient, a report from a sending facility identifying that a mammogram has been done, or as a procedure documented within Past Medical/Surgical history in the cumulative patient profile.

Mammogram Exclusion can be documented as a Q141A service code that has been submitted for a patient, any of the following diagnosis codes entered in the current or past diagnosis/problem sections of the cumulative patient profile:

- V45.71: Acquired absence of breast and nipple (ICD-9)
- 174: Malignant neoplasm of female breast (ICD-9)

OR as any of the following text documented as a current/past diagnosis or as a procedure within past medical/surgical history in the cumulative patient profile:

- 'mastectomy'
- 'cancer breast'
- 'breast ca'
- 'ca breast'

Mammogram Declined can be documented as a procedure captured within past medical/surgical history of the cumulative patient profile, or specific local EMR functionality representing best practice workflow.

Mammogram Results Pending can be documented as a procedure captured within past medical/surgical history of the cumulative patient profile, or specific local EMR functionality representing best practice workflow.

Suggested Indicator Use:

Physician or practice use of this indicator is to manage the recall of patients who are overdue, or in pending status for results, or will be coming due soon for a mammogram.
