

Enhanced Well-baby Visit

I4C Indicator PHC-CHLD-001: Enhanced Well-baby Visit v 1.1

Category: Preventive Health Care/Baby and Child Well-being

Purpose:

This indicator is used to recall patients who have not been seen for an 18-month well-baby visit.

Source:

Based on the HQO indicator framework version published October 2015.

Base Population:

All patients age 17-24 months with an Active demographic status recorded in the EMR.

Indicator Segments:

Up-to-date: Count of patients age 17-24 months WITH an enhanced well-baby visit documented.

Overdue: Count of patients age 17-24 months WITH an enhanced well-baby visit documented.

Suggested Indicator Use:

Physician or practice use of this indicator is to identify or recall patients due for an 18-month well-baby visit.

Enhanced Well-baby Visit can be documented as an enhanced 18-month well baby visit submitted for billing (code A002) or documented elsewhere using EMR functionality identified as best practice workflow. More information will be forthcoming on EMR-specific data capture details.
